GE23131-Programming Using C-2024

Question **1**

Correct

Marked out of 3.00

Flag question

Some data sets specify dates using the year and day of year rather than the year, month, and day of month. The day of year (DOY) is the sequential day number starting with day 1 on January 1st.

There are two calendars - one for normal years with 365 days, and one for leap years with 366 days. Leap years are divisible by 4. Centuries, like 1900, are not leap years unless they are divisible by 400. So, 2000 was a leap year.

To find the day of year number for a standard date, scan down the Jan column to find the day of month, then scan across to the appropriate month column and read the day of year number. Reverse the process to find the standard date for a given day of year.

Write a program to print the Day of Year of a given date, month and year.

Sample Input 1

Sample Output 1

170

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
    int main()
 2
 3 ▼
      int a,b,c,l=1;
 4
      scanf("%d%d%d",&a,&b,&c);
      if(((c%4==0)&&(c%100!=0))||(c%400==0))
 6
 7 🔻
       if(b>1)
 8
       a+=31;
 9
       if(b>2)
10
       a+=1? 29:28;
11
       if(b>3)
12
13
       a+=31;
       if(b>4)
14
15
       a+=30;
16
       if(b>5)
17
       a+=31;
       if(b>6)
18
19
       a+=<mark>30</mark>;
20
       if(b>7)
21
       a+=31;
       if(b>8)
22
23
       a+=31;
       if(b>9)
24
25
       a+=30;
26
       if(b>10)
27
       a+=31;
       if(b>11)
28
29
       a+=30.
```

33 } 34 }

Question ${\bf 2}$

Correct

Marked out of 5.00

▼ Flag question

Suppandi is trying to take part in the local village math quiz. In the first round, he is asked about shapes and areas. Suppandi, is confused, he was never any good at math. And also, he is bad at remembering the names of shapes. Instead, you will be helping him calculate the area of shapes.

- When he says rectangle he is actually referring to a square.
- When he says square, he is actually referring to a triangle.
- · When he says triangle he is referring to a rectangle
- And when he is confused, he just says something random. At this point, all you can do is say 0.

Help Suppandi by printing the correct answer in an integer.

Input Format

Length of 1 side Length of other side Note: In case of triangle, you can consider the sides as height and length of base Output Format Print the area of the shape. Sample Input 1 Τ 10 20 Sample Output 1 200 Sample Input 2 S 30 40

600 Sample Input 3 R 10 10 Sample Output 3 100 Sample Input 4 G 8 8 Sample Output 4 0

Sample Output 4 0 Explanation: First is output of area of rectangle Then, output of area of triangle Then output of area square Finally, something random, so we print 0 **Answer:** (penalty regime: 0 %) #include<stdio.h> int main() 2 3 ▼ { int a,b; char c; 5 scanf("%c %d %d",&c,&a,&b); **if**(c=='R') printf("%d",a*b); else if(c=='S') 9 printf("%d",(a*b)/2); 10 11 else if(c=='T') printf("%d",a*b); 12 13 else 14 nrintf("0").

Question **3**Correct

Superman is planning a journey to his home planet. It is very important for him to know which day he arrives there. They don't follow the 7-day week like us. Instead, they follow a 10-day week with the following days: Day Number Name of Day 1 Sunday 2

r riag question

Input format: • Contain a number n (0 < n)Output format: Print the name of the day you are arriving on Example Input **Example Output** Kryptonday **Example Input Example Output Monday Answer:** (penalty regime: 0 %) #include<stdio.h> int main() 2 3 , int n,a; scanf("%d",&n); a=(n%296)%10;switch(a) 8 case(0): 9 printf("Sunday"); 10 break; 11 case(1): 12 printf("Monday"); 13 break; 14 case(2): 15 printf("Tuesday"); 16 break; 17 18 case(3): 19 nrintf("Wednesday").

Sunday always. • It has only 296 days. After the 296th day, it goes back to Sunday. You begin your journey on a Sunday and will reach after n. You have to tell on which day

you will arrive when you reach there.

```
PITHELL HIMI SWAY /,
23
            break;
24
            case(5):
            printf("Friday");
25
26
            break;
27
            case(6):
            printf("Saturday");
28
29
            break;
            case(7):
30
            printf("Kryptonday");
31
            break;
32
            case(8):
33
            printf("Coluday");
34
            break;
35
            case(9):
36
            printf("Daxamday");
37
38
            break;
39
            return 0;
40
41
42
43
```
